Education

B.S. Computer Science | California State University, Fullerton

Fullerton, CA · May 2024

Experience

Crew Member | Trader Joe's

Orange, CA · Oct 2019 – Present

- **Customer communication:** advise customers on products daily, developing clear and concise communication skills applicable to client-facing technical roles.
- **Cross-functional collaboration:** coordinate with team members to optimize workflows and resolve issues in real time — directly transferable to agile team environments.

Projects

TaskPilot | *Python · Flask · Celery · Redis · MySQL · JWT · Postman*

- Full-stack task management API supporting user registration, login, and CRUD operations with JWT-secured endpoints to restrict unauthorized access.
- **Async processing:** integrated Celery and Redis to handle task operations asynchronously, cutting response wait times for long-running jobs.
- Designed RESTful architecture following industry standards; documented and tested all endpoints via Postman.

Object Detector | *React · JavaScript · TensorFlow.js · COCO-SSD · HTML/CSS*

- **Real-time detection:** built a web app using TensorFlow.js and the COCO-SSD model to identify objects in live webcam streams and uploaded images.
- Implemented adjustable confidence thresholds and max-detection controls, enabling precision tuning for varied environments.

QuizLingo | *Kotlin · Google ML Kit · Unsplash API*

- Mobile vocabulary app using Google ML Kit Translator API to validate user input and deliver real-time feedback on language assessments.
- Integrated Unsplash API to pair randomized vocab words with contextual images, reinforcing retention through visual association.

University Database | *HTML · CSS · MySQL · PHP*

- Designed and implemented a relational MySQL database storing student, course, and faculty records with an HTML/CSS front-end for data retrieval.

Technical Skills

Languages: Python, C/C++, JavaScript, HTML/CSS, Kotlin

Frontend: React, Next.js, Tailwind CSS

Backend: Flask, PHP

Database: SQL (MySQL)
